Our Shareholders

GHG emissions calculation and visualization solution

Main Platforms

In addition to GHG calculation and data collection, our product supports ESG regulatory disclosures such as the EU CSRD and Japan's SSBJ, as well as global frameworks like CDP and TCFD.

Zeroboard

Scope 1-3
Environmental impact

For granular GHG emission calculations and tracing impacts such as water consumption, land use, waste, etc.

Zeroboard ESG

ESG data collection

For companies looking to consolidate high level ESG data and report under international frameworks

Dataseed SAQ

Supply chain engagement
questionnaire

For companies who need to gather ESG information from their supply chain or conduct environmental/human rights risk analysis.

Based On Your Needs and Context

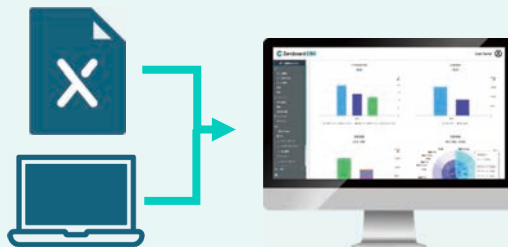

To support broad adoption across internal departments and group companies while reducing operational burden, flexible configuration options are available. In addition to pre-set data items and support for disclosure frameworks such as securities reports and related regulations, companies can also register their own custom KPI calculation logic. (Planned support for CSRD/SSBJ)

Step 1 Setting of data items

- Streamlines work to comply with CSRD/GRI and other reporting disclosure FWs
- Collect preset FW and target data items
- Design/setup of your own data items is also possible

Step 2 Collect and aggregate data

- Minimize the impact on on-site operations by importing Excel templates, etc., while introducing the system in phases
- Centralized management of tasks and efficient management of due dates through reminders

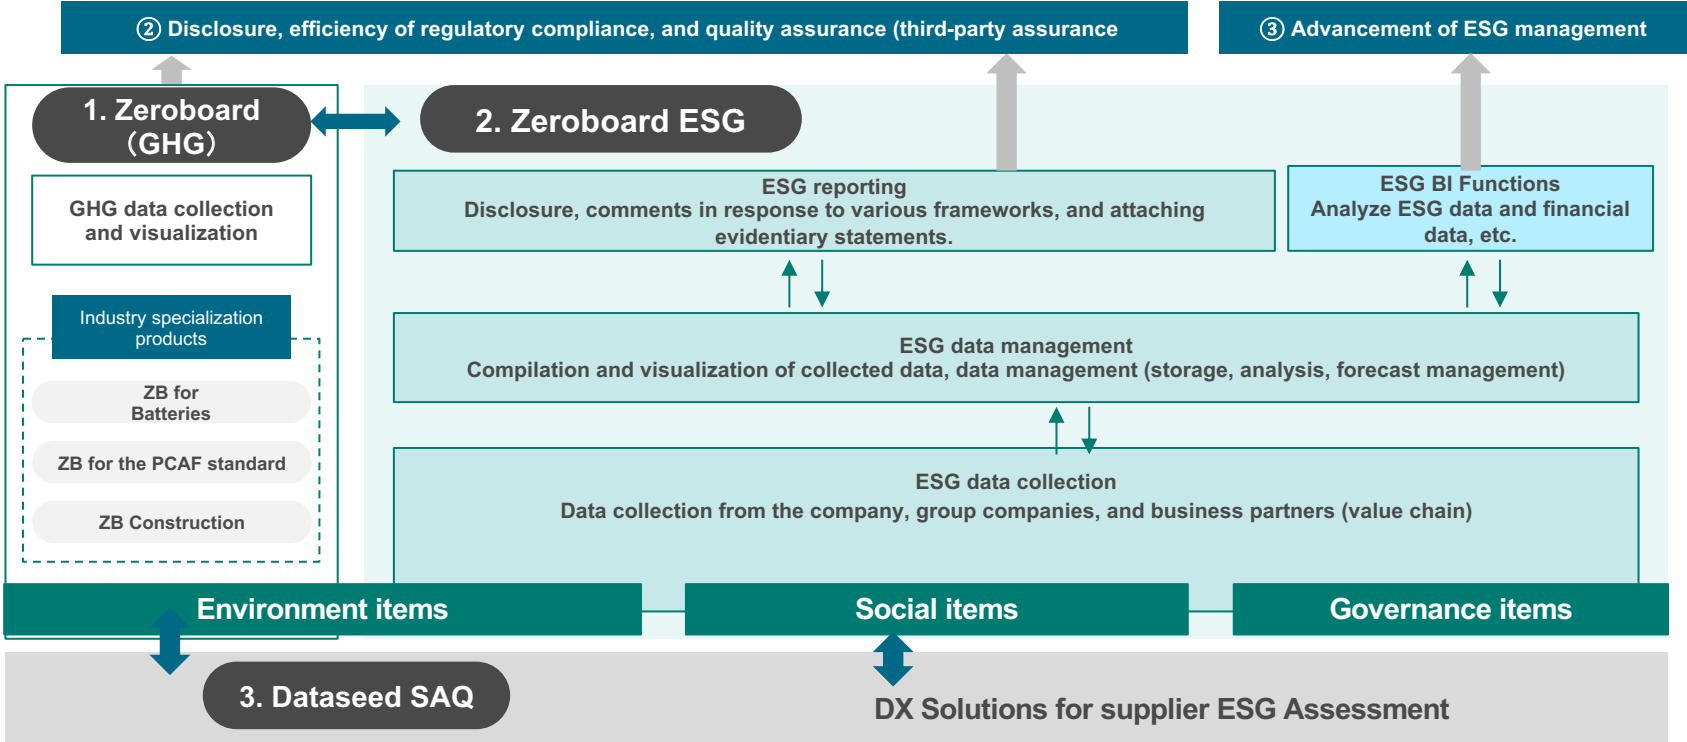

Step 3 Visualization and report

- Exhaustive KPI management
- Tracking of short/medium-term KPIs related to materiality
- Automatic visualization of GAP against target values

Zeroboard's Overall Solution Offering

Centered on the Zeroboard ESG, the Zeroboard (GHG calculation) and SAQ work together to solve the ESG-related issues faced by companies and contribute to the advancement of ESG management.

| Decarbonization management partner
